Contents

Preface to Second Edition	ix
Preface to First Edition	xi
1 Introduction	1
1.1 Introductory Remarks	1
1.2 Thermodynamic Potentials	2
1.3 Capacity of Heat	6
1.4 Frequently Used Terms	7
1.5 Applications and Examples	8
1.6 Problems without Worked Solutions	9
2 Statistical Mechanics of an Ideal Gas (Maxwell)	11
2.1 Introductory Remarks	11
2.2 Maxwell's Treatment	11
2.3 Lagrange's Method of Multipliers	14
2.4 Applications	17
2.4.1 Pressure exerted on the wall of a vessel	17
2.4.2 Effusion of gas through a hole	18
2.4.3 Thermionic emission	19
2.5 Distribution Function for all Directions	20
2.6 Applications and Examples	21
2.7 Problems without Worked Solutions	24
3 The <i>a priori</i> Probability	27
3.1 Introductory Remarks	27
3.2 The <i>a priori</i> Probability	27
3.3 Examples Illustrating Liouville's Theorem	30
3.4 Insertion of Physical Conditions	31
3.5 Applications and Examples	35
3.6 Problems without Worked Solutions	37

4	Classical Statistics (Maxwell-Boltzmann)	39
4.1	Introductory Remarks	39
4.2	The Number of Arrangements of Elements in Maxwell-Boltzmann Statistics	39
4.3	Method of Maximum Probability	41
4.3.1	The case of nonconserved elements	43
4.3.2	The case of conserved elements	43
4.3.3	The meaning of μ	44
4.3.4	Identification of μ with $1/kT$	45
4.3.5	Distribution of particles in the atmosphere	47
4.3.6	Law of equipartition of energy	47
4.4	Applications	48
4.4.1	The monatomic gas	48
4.4.2	A solid	49
4.5	Applications and Examples	49
4.6	Problems without Worked Solutions	54
5	Entropy	57
5.1	Introductory Remarks	57
5.2	The Boltzmann Formula	57
5.3	Applications and Examples	61
5.4	Problems without Worked Solutions	66
6	Quantum Statistics	67
6.1	Introductory Remarks	67
6.2	<i>A priori</i> Weighting in Quantum Statistics	68
6.2.1	Approximate calculation of number of states	71
6.2.2	Accurate calculation of number of states	72
6.2.3	Examples	75
6.3	The Allowed Number of Elements in Quantum States	78
6.3.1	One element	78
6.3.2	Two non-interacting elements	78
6.3.3	More than two elements stuck together	80
6.4	Counting of Number of Arrangements	80
6.4.1	Fermi-Dirac statistics	80
6.4.2	Bose-Einstein statistics	82
6.5	Quantum Statistics at High Temperatures	82
6.6	Applications	84
6.7	Summary	85
6.8	Applications and Examples	86
6.9	Problems without Worked Solutions	93

7	Exact Form of Distribution Functions	95
7.1	Introductory Remarks	95
7.2	Fermi-Dirac Occupation Numbers	95
7.3	Bose-Einstein Occupation Numbers	97
7.4	Thermodynamical Functions	100
7.5	Applications and Examples	100
7.6	Problems without Worked Solutions	106
8	Application to Radiation (Light Quanta)	107
8.1	Introductory Remarks	107
8.2	Planck's Radiation Law	108
8.3	Applications and Examples	110
8.4	Problems without Worked Solutions	115
9	Debye Theory of Specific Heat of Solids	119
9.1	Introductory Remarks	119
9.2	The Calculation	121
9.3	Applications and Examples	124
9.4	Problems without Worked Solutions	129
10	Electrons in Metals	131
10.1	Introductory Remarks	131
10.2	Evaluation of the Distribution Function	132
10.2.1	First approximation	133
10.2.2	Second degree of approximation	134
10.3	Applications and Examples	136
10.4	Problems without Worked Solutions	146
11	Limitations of the Preceding Theory — Improvement with Ensemble Method	149
11.1	Introductory Remarks	149
11.2	Ensembles — Three Types	152
11.2.1	Ensembles and ergodic hypothesis	152
11.2.2	The ensemble distribution function	154
11.3	The Canonical Ensemble of a Closed System	156
11.3.1	Thermodynamics of a closed system	157
11.4	The Grand Canonical Ensemble	159
11.5	Ensemble Method of Maximum Probability	160
11.6	Comments on the Function ρ	161
11.7	Applications and Examples	163
11.8	Problems without Worked Solutions	168

12 Averaging instead of Maximization, and Bose-Einstein Condensation	169
12.1 Introductory Remarks	169
12.2 The Darwin-Fowler Method of Mean Values	170
12.2.1 Mean occupation number $\bar{n}_j$	171
12.2.2 Taking subsidiary condition into account	172
12.3 Classical Statistics	173
12.4 Quantum Statistics	175
12.4.1 Fermi-Dirac statistics	175
12.4.2 Bose-Einstein statistics	176
12.4.3 Evaluation of the coefficient of ω^N in Z_ω	176
12.5 Bose-Einstein Condensation	182
12.5.1 The phenomenon of Bose-Einstein condensation	182
12.5.2 Derivation of the Bose-Einstein distribution function under condensation conditions	183
12.6 Applications and Examples	193
12.7 Problems without Worked Solutions	204
13 The Boltzmann Transport Equation	207
13.1 Introductory Remarks	207
13.2 Distribution Functions	207
13.3 Solution of the Boltzmann Equation	209
13.3.1 Solving the Boltzmann equation for two typical cases	210
13.3.2 Calculation of the current density	211
13.3.3 Application to metals	212
13.3.4 Calculation of the relaxation time	214
13.4 Applications and Examples	220
13.5 Problems without Worked Solutions	220
Bibliography	223
Index	229
